Project Introduction(need a intro paragraph here)

The Hangdog Happenstance is a social website that connect people with similar interests. The application stores what the users like and based on this information it suggests friends to the user.

The project was developed using jade, javascript, mongoDB, node and express.

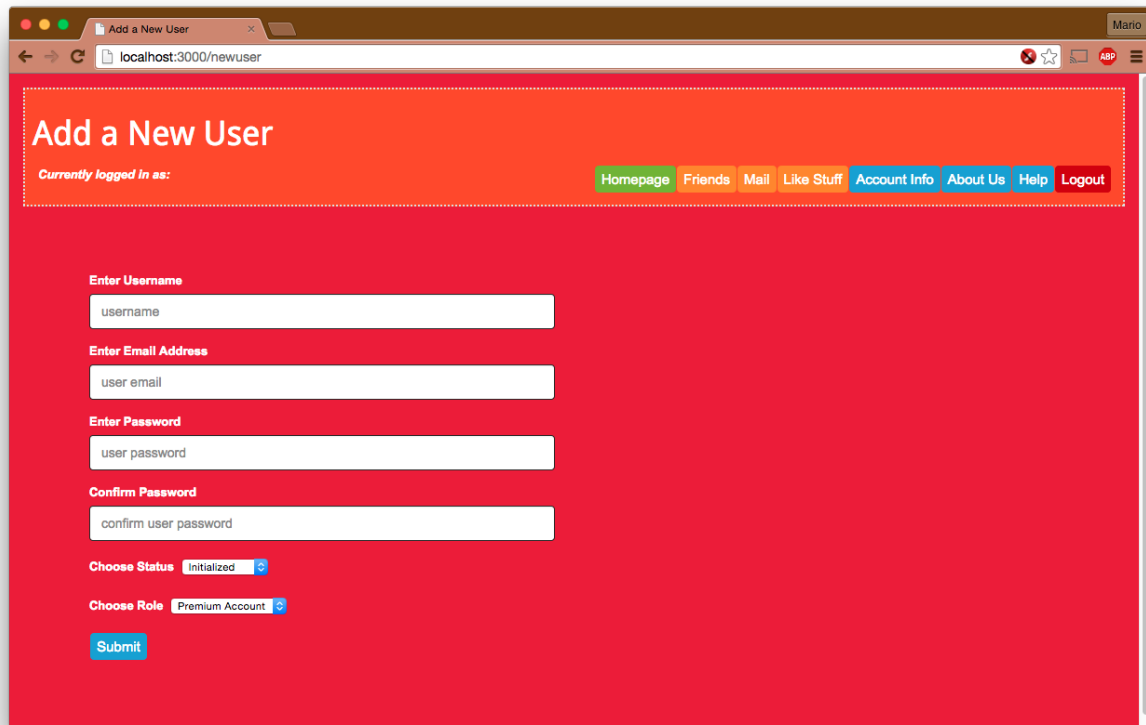

The description about how to use the website and what features are implemented are shown on the next topics.

Getting Started

Welcome to the main webpage of Hangdog Happenstance. From here on, you need to register an account and login to be allowed access inside. Let's do so now by hitting the Register button on the right-hand corner of the page or right above the submit button that says "Don't have an account yet? Click here".

Creating an Account

The screenshot shows a web browser window with the address bar displaying 'localhost:3000/newuser'. The page has a red header with the title 'Add a New User' and a navigation bar with links: 'Homepage', 'Friends', 'Mail', 'Like Stuff', 'Account Info', 'About Us', 'Help', and 'Logout'. Below the header, the form is titled 'Add a New User' and includes a 'Currently logged in as:' section. The form fields are: 'Enter Username' (text input with placeholder 'username'), 'Enter Email Address' (text input with placeholder 'user email'), 'Enter Password' (text input with placeholder 'user password'), and 'Confirm Password' (text input with placeholder 'confirm user password'). Below these fields are two dropdown menus: 'Choose Status' (set to 'Initialized') and 'Choose Role' (set to 'Premium Account'). A 'Submit' button is at the bottom of the form.

Enter a username that you wish to use. Consider it a nickname for yourself. Make sure to enter a valid email address that you can be contacted outside of the website. Make sure to include a unique password that you haven't used in another website.

NOTE: The drop down text boxes were not able to be implemented by our team in time before project submission.

localhost:3000/newuser

Add a New User

Currently logged in as:

mandrade

Enter Password

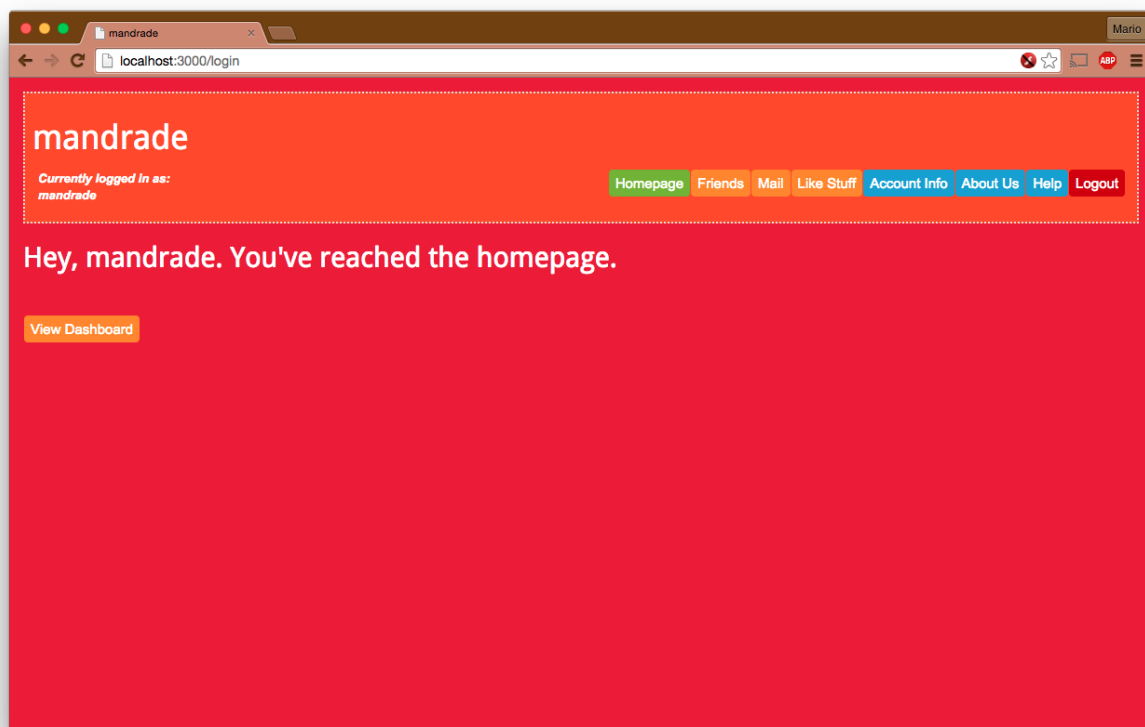

Don't have an account yet? [Click here.](#)

Submit

Let's now login to the website. Please login using the credentials you entered in the previous page.

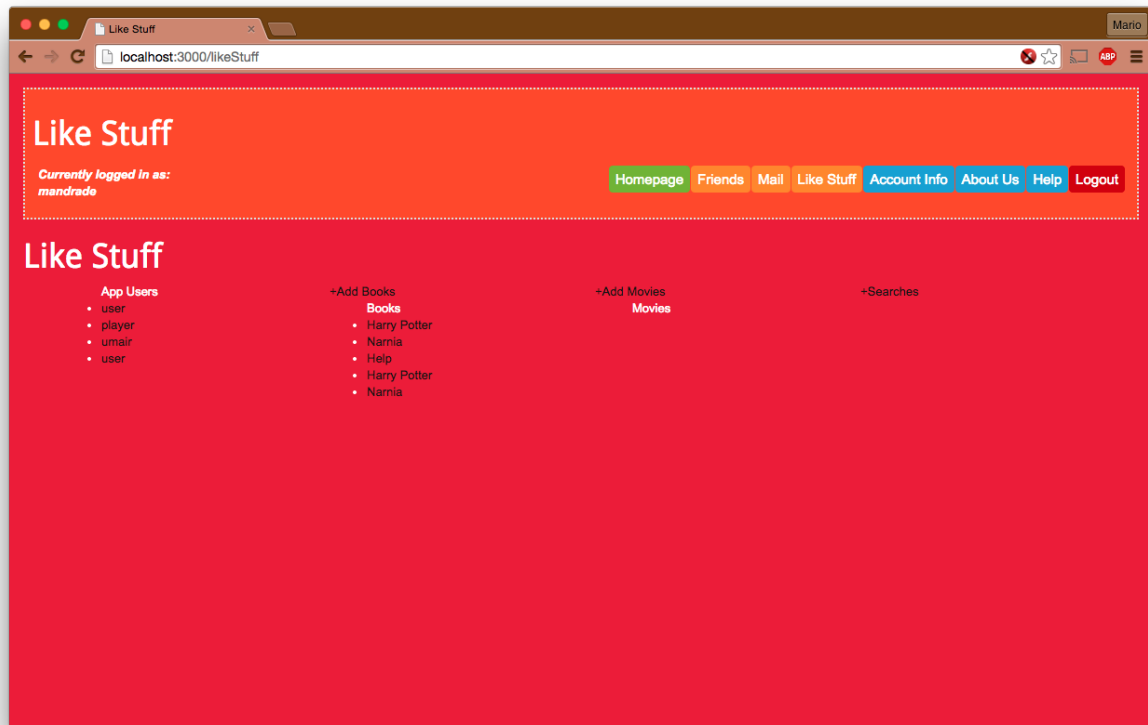

Uh oh, you didn't enter the credentials correctly. Make sure you entered the correct spelling to each the username and the password.

Once you retry entering the credentials you should make it to the main page of the account. From here, you have all your options displayed to you. You can find and make friends, send them messages and like stuff that shows what you have in common with potential friends and your current friends. Let's go like some stuff!

Go Like Stuff

After click the Like Stuff link you will be taken to this link. All the items that are like will be added here. Let's add a new field into the movies section.

+Searches

Ta-dah! Forrest Gump has been added to the list. You now like the movie Forrest Gump.

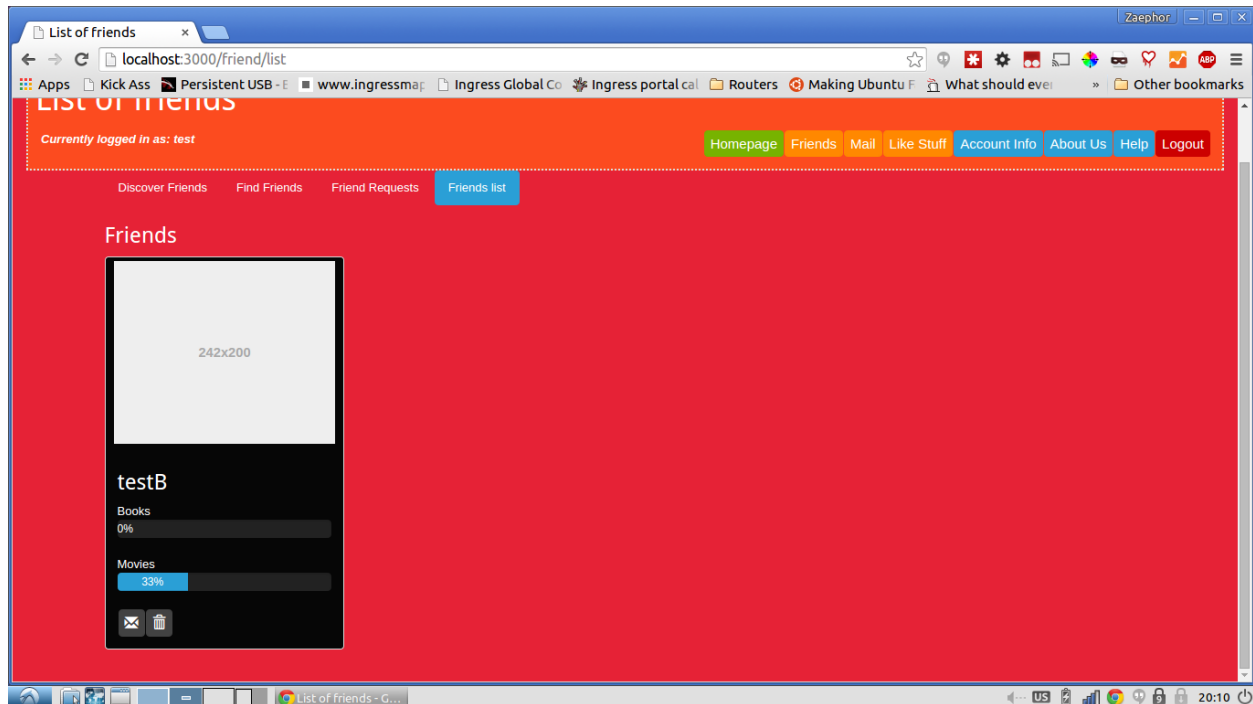

Find / Add Friends

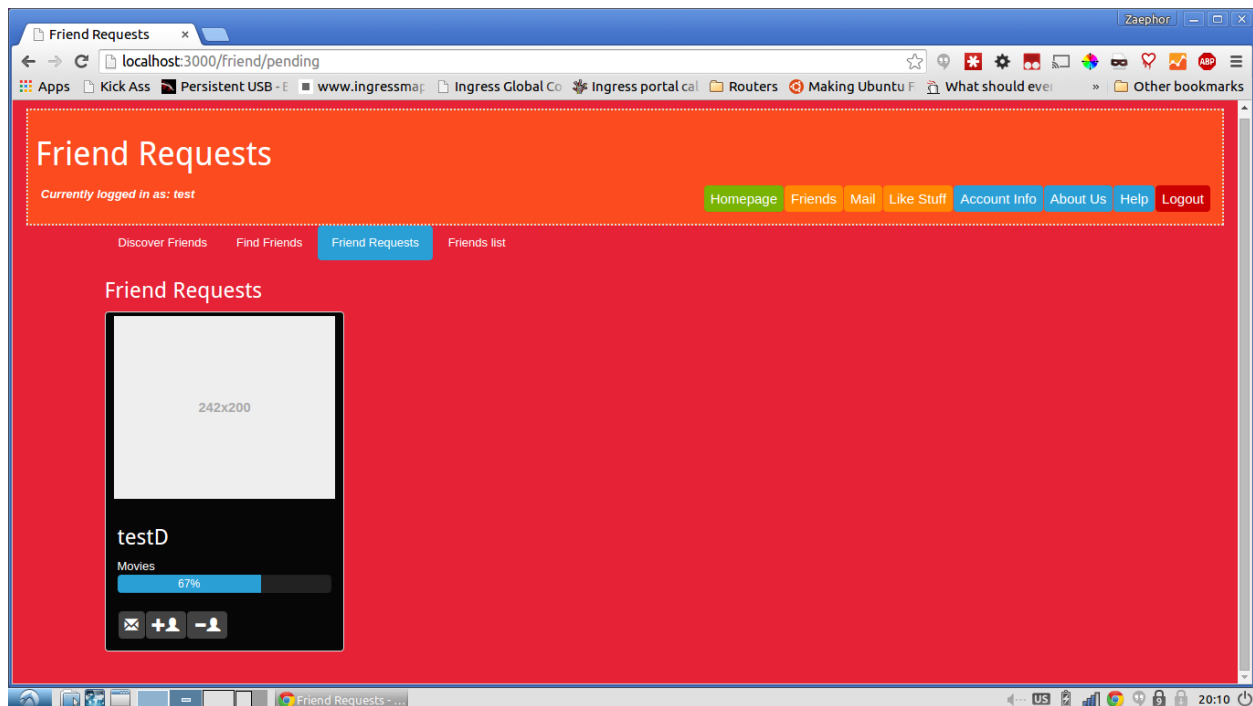

Search through all the users in the system, partial case-insensitive searches will show any user regardless if they are a friend or stranger. The percentage of similar likes in each category is calculated to get an idea of similar interests.

Discover new people who are not already friends with you.

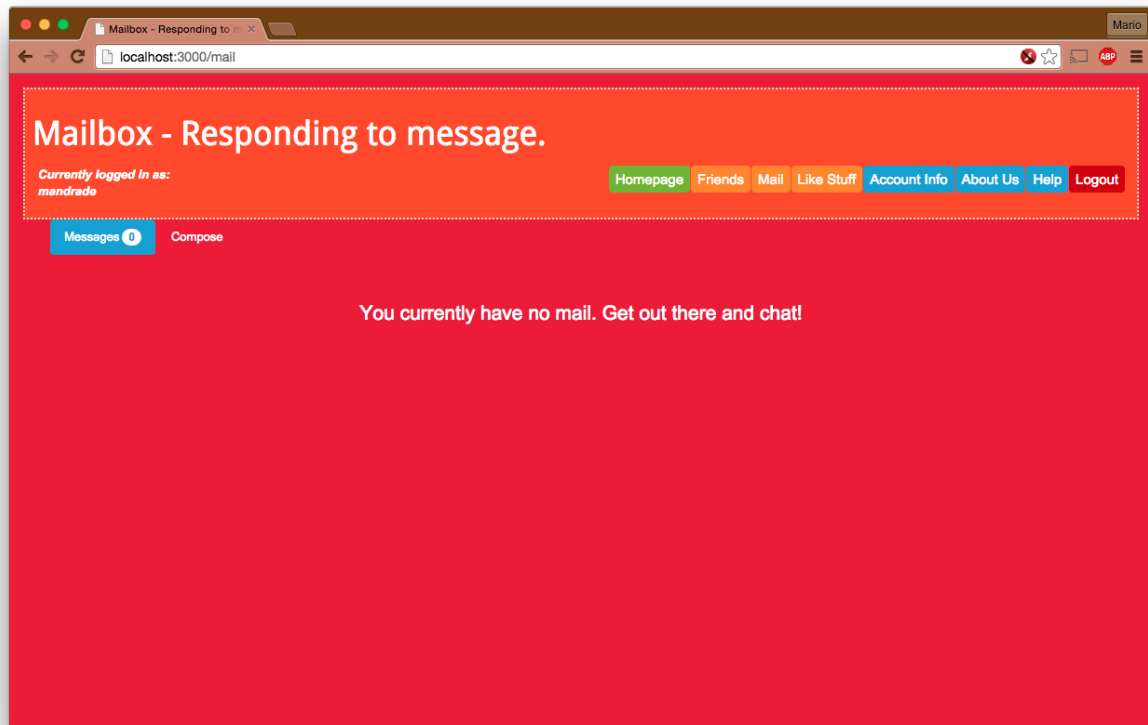

Check your existing friends, and see if they have more common interests compared to the last time you checked on them.

Show people who want to get to know you, as well as their percentage of similar interests. Can also approve or reject them.

Check Your Mail List

Let's try sending some messages. Currently you have no messages. Go make friends and sends some messages. To send a new message click the compose button next to the messages list.

Send Some Mail

Messages Compose

Mail To	user
Subject	Homework Help
Message	I need to copy the homework please!

Send ↗

Once you've made some friends, send them a message. Fill out the form and then click submit for them to receive it.

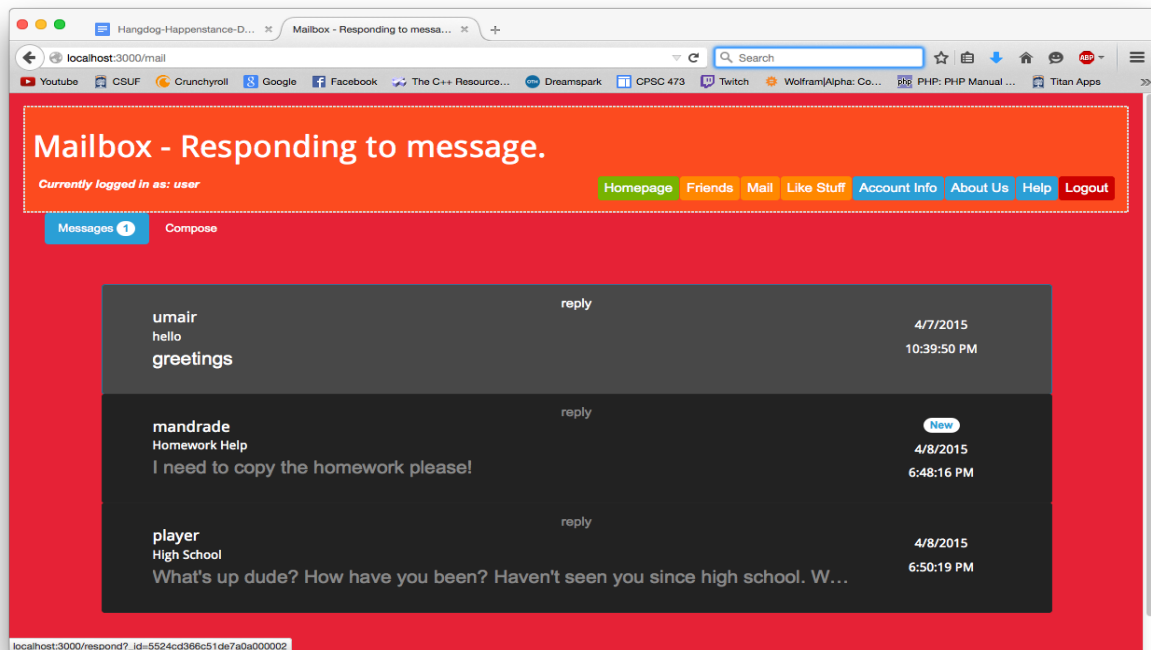

User now has a message from you, mandrade. It seems he has one from player as well. In the button on the left-hand side shows that user has two unread messages. How do we respond to them? Simple. Click the message you wish to respond. As you can see in player's message, it's cut-off so you need to go to the respond page to see it in full.

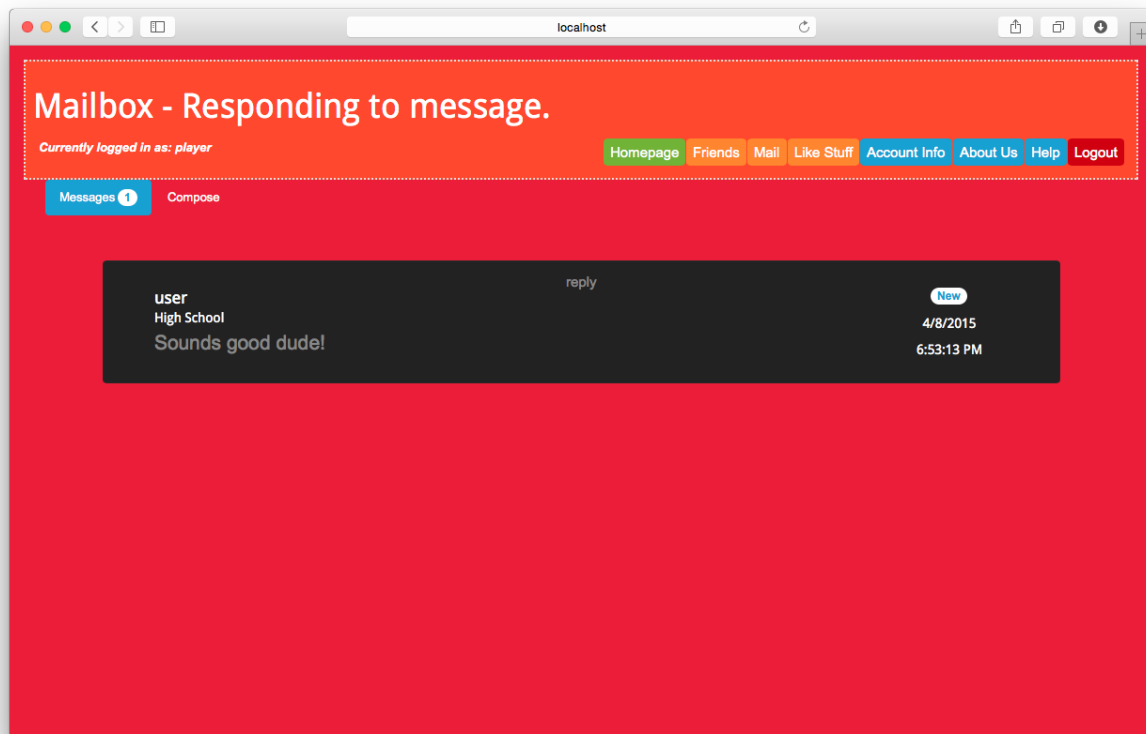

Respond To A Message

The screenshot shows a web application interface with a red background. At the top, there's a navigation bar with links: Homepage, Friends, Mail, Like Stuff, Account Info, About Us, Help, and Logout. Below this, a status bar says 'Currently logged in as: user'. The main content area has two tabs: 'Messages' and 'Compose'. The 'Compose' tab is active, showing a form to write a new message. The form has three fields: 'Mail To' with the value 'player', 'Subject' with the value 'High School', and a large text area for the message body with the placeholder text 'Enter your message here...'. A 'Send' button is located at the bottom right of the form.

By click on player's link, we get the full message displayed on well. You can now send a response to them.

Look at that. Player's new message icon is now blank and user now has 1 unread message instead of 2. What about player? We responded to him.

There we go, looks like he got it. He can now send back a message to you.

Account Information

A screenshot of a web application showing the 'Account Information' page. The user is logged in as 'mandrade'. The page has a red header with the title 'Currently logged in as: mandrade' and a navigation bar with links: 'Homepage', 'Friends', 'Mail', 'Like Stuff', 'Account Info', 'About Us', 'Help', and 'Logout'. The main content area has a blue bar with 'Enter Username', 'Enter Email Address', 'Enter Password', 'Status', and 'Role'. Below these are input fields for 'mandrade', 'mandrade@email.com', a masked password, 'Initialized', and 'Premium'. At the bottom are buttons for 'Enable Edit' and 'Delete Account'.

You can view your account information anytime, and edit the info as you wish.
